Update No. 17

Buildings on site during the 1990s.

1997	During the 1990s a considerable amount of funds was spent on refurbishment across the school. Refurbishment began with the original Clarke wing which included 5 classrooms, administration offices with a new first aid room. The kiln that was outside this first aid room was then moved near the present prep classrooms. The front office entry was moved from a side facing the east to a door on the southern side. We now have a wonderful street presence with a door entry door facing Church Street.
1997	New student amenities were built and three demountable classrooms were refurbished. By this time the After School Hours Care was operating from the fourth room in the demountable building.
1997	The original pergola area was constructed and an amphitheatre was built leading to the oval. The cost of all these projects in 1997 amounted to \$454 955. The school received \$380 570 in grants from the Federal and State governments.

This is ninetieth anniversary aerial photograph. The old school building and hall have gone. The new additions since 1977 are the double story building, demountable and covered area. Alterations to older buildings include additional shading and an extension on the south-east corner of the 1972 building.
